# Prudentia™

*Whilst we might work together in teams to design and deliver the curriculum, we rarely get to see how our 'parts' of the curriculum fit together with the other 'parts'*

**Prudentia makes transparent...**

- **The overarching curriculum framework**
- **Student outcomes at the macro and micro level**
- **The relationships between the outcomes**
- **Alignment between outcomes, teaching and learning activities, and assessment**
- **Problems and anomalies associated with any of the above**

*Prudentia allows third parties to view and understand the course design ...*

Prudentia throws up a hazard sign alerting the curriculum designer of a misalignment - forward, backwards and across the curriculum design...

*Prudentia can be shared when there is a generic language into which all courses can be translated and mapped...*
